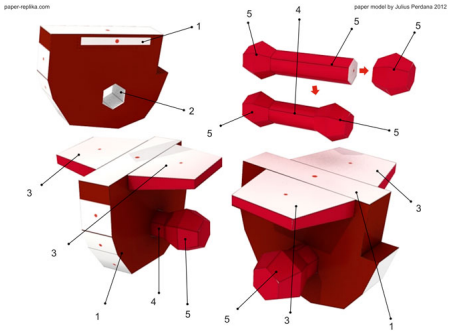
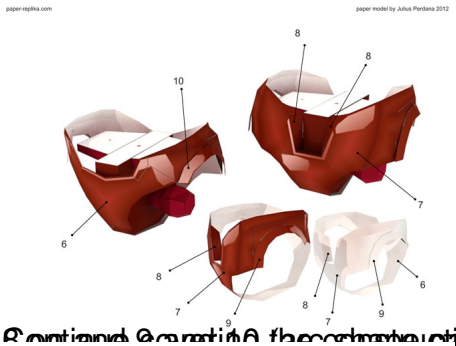
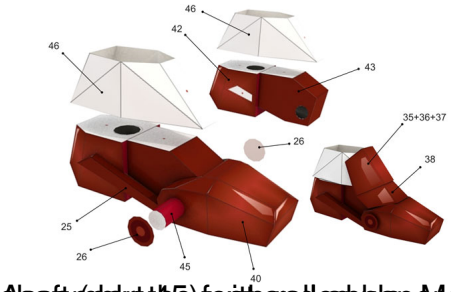
Finally after about a week focusing on part 3 patterns, it's finally finished and released. The template will have the same versions as previously, colored, blank, and weathered blank template and also a rough setup of PDO file for Pepakura Designer. The detail on Iron Man mark VII leg actually is not too detail compared to War Machine one, but the shape is mainly curve that was quite hard to model to become a paper model. The joints are still quite similar to War Machine ones, but I make the hip joints bigger and more complicated on the knee joints. But overall it's not too hard to build, all parts are quite modular and easy to identified. Assembly instruction images are for the hip and right leg only, the left leg parts are with the same parts number only they were mirrored.



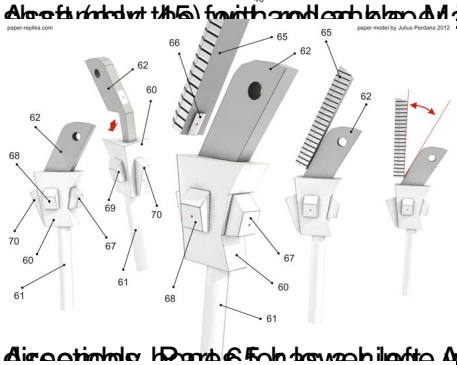
Assembly all the hip parts. Part 2 must be in place to strengthen the joints. Make sure all fold line are well scored for easier folding, especially part 5



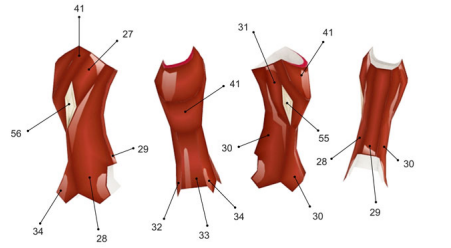
Continue 9 and 10 the cross-sections of the hip with part 6 and 7. Complete them with attaching



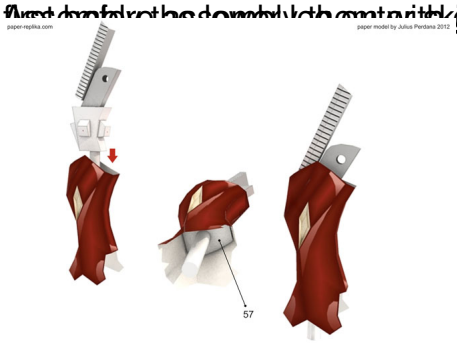
Assemble the foot and ankle. Make sure you have part 46,43 and 42 with holes. Strengthen the



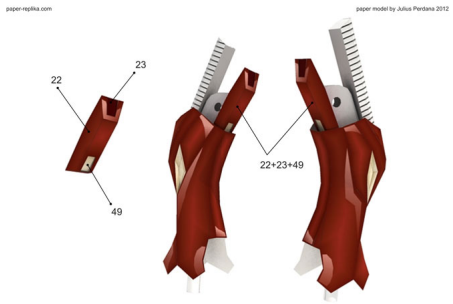
Assembly Part 65 has a hole. Which is part 66. Attach part 65 in a way so it can sway on red arrow



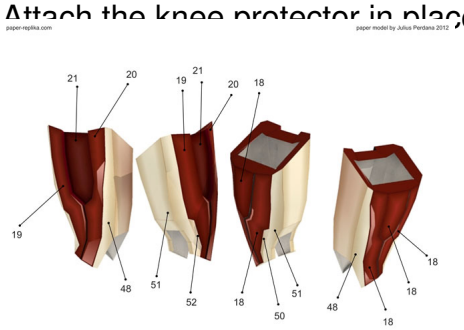
Assemble the lower left and right, be advised part 56 and 55 are valley folded. Shape all parts



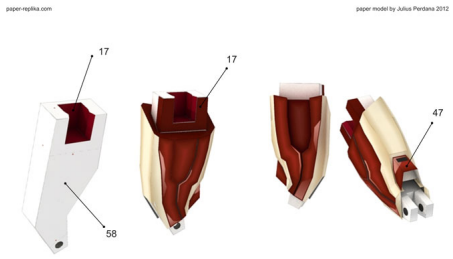
Combine to bone. Combine lower leg bone and outer skin. Place former (part 57) inside outer skin first before



Attach the knee protector in place.

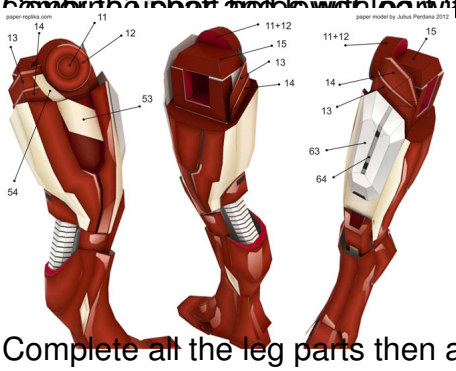


Assembly the thigh parts. Part 21 is valley folded.



Combine thigh parts with the leg detail (part 47 and 58). Then cover upper part of the joint

Combine shaft hole with part 24 inserting hinge shaft (part 44). Strengthen it at your will.



Complete all the leg parts then attach both legs to the hip.
