New variant of Wanda's AGE-1 Gundam paper model has been release, it is AGE-1 Titus Gundam. This release is a bit different from previous Wanda's works, the parts came in one package instead of part by part, and he was helped by Rew Papercrafters to test build this template design. The model photos below were built and photographed by Rew Papercrafter. The template of that Gundam model was printed in Jasmine glittered paper with laser printer in a printershop. The interesting part is Wanda also made the upgrade part for AGE-1 Gundam, it is the cockpit part. Rew Papercrafter took about a week to construct this model. Files are in PDF and PDO for instructions and AGE core assembly instruction is the same as the normal one. Template design by Wanda Bachtiansyah
